Interest in the functional roles of astrocytes in the nervous system has grown significantly as it is recognized that these cells not only have their own pharmacology but also release neuro- and vaso-active factors. Extrasynaptic GABAA receptors: Form, Pharmacology and Function Biophysical properties of recombinant $\alpha 1$ subunit-containing GABA A R channels (R.L.M.). Molecular biological and biochemical techniques have been instrumental in determining the basic properties of ligand-gated ion channels, and by inference, the functional properties of native receptors in the CNS. Functional pharmacology: the drug discovery bottleneck ... Functional pharmacology, especially in vivo, is the integrating driver for drug discovery. It needs to be sustained, and given the same credibility in research settings as that already given to reductionism.

A Structural Biology Perspective on NMDA Receptor ... Here, we review recent advances in the structural biology of NMDARs with a focus on pharmacology and function. Structural analysis of the isolated extracellular domains in combination with the intact heterotetrameric NMDAR structure provides important insights into how this sophisticated ligand-gated ion channel may function. The Histamine H3 Receptor: Structure, Pharmacology, and ... The best-known function of the H3R is the presynaptic regulation of neurotransmitter release in the CNS and peripheral nervous system. This regulation has been reported for histamine itself, noradrenaline, dopamine, acetylcholine (ACh), GABA, glutamate, serotonin (5-HT), and some neuropeptides.
